

1. Baseline paragraph with rustybuzz shaping.

Libertinus Serif is now shaped via rustybuzz (HarfBuzz in Rust), enabling GPOS kerning, standard ligatures (fi, fl, ff), and OpenType feature overrides per text run. The advance-width computation is based on actual glyph metrics rather than a heuristic character-width estimate.

2. Text decoration.

Normal, underlined, strikethrough, highlighted yellow .

3. Paragraph background and border.

This paragraph has a box border with default padding.

After the section break — new page.

This content appears on the page started by the SectionBreak element. The page margins were narrowed to 20 mm on all sides for this section.
